

ABSTRACT

The moisture sensor 10 of the preferred embodiment includes a first platform 12, conductive traces 14, and a processor 16. The moisture sensor 10 can be inserted into the soil of a plant and used to measure the moisture in the soil. In the preferred embodiment, the moisture sensor 10 indicates the moisture in the soil of the plant. With this knowledge, a user can determine whether to hydrate the plant at any given time.
